

Attention

If a family member has died from an overdose caused by a Duragesic (Generic Fentanyl) Pain Patch or if you or a family member has been seriously harmed by the patch; please contact this Law Office at once - we will help you learn about your rights.

The recall is due to the identification of a possible fold-over defect present in the product that potentially could cause leakage of the duragesic (Generic Fentanyl) Pain Patch. Direct exposure to duragesic can cause serious harm, including accidental overdose.

SYMPTOMS OF OVERDOSE CAN INCLUDE:

- Slow breathing • Seizures • Tiredness • Confusion • Cold and Clammy Skin
- Decreased Pupil Size • Dizziness or Weakness • Loss of Consciousness or Coma
